15	20	36.4	31.8	33	22	22	33	335	ATV 312HD15S6	10.000

(1) These values are given for a nominal switching frequency of 4 kHz, for use in continuous operation. The switching frequency is adjustable from 2 to 16 kHz. Above 4 kHz, derate the nominal drive current. The nominal motor current should not exceed this value. See derating curves on page 56.  
 (2) Typical value for a 4-pole motor and a maximum switching frequency of 4 kHz, with no line choke for max. prospective line Isc (4).  
 (3) Nominal supply voltage, min. U1, max. U2: 200 (U1)...240 V (U2), 380 (U1)...500 V (U2), 525 (U1)...600 V (U2).  
 (4) If line Isc is greater than the values in the table, add line chokes (see page 43).  
 (5) Drives supplied with category C2 or C3 integrated EMC filter. This filter can be disconnected.  
 (6) If a communication card is used, it takes the place of the control I/O card. To reduce installation costs, the drive can be ordered without a control I/O card. To do this, simply add a B at the end of the reference. For example: ATV 312H075N4 becomes **ATV 312H075N4B**. The communication card must be ordered separately (see page 28).  
 (7) EMC filter available as an option (see page 45).  
 (8) Mandatory line choke to be ordered separately (see page 43).
